## Research Interests

**Distributed systems, cloud computing, serverless computing, storage systems, operating systems, high-performance computing, machine learning (ML) systems**

The overarching goal of my research is to enable practical, efficient, and easy-to-use computer systems for the growing data demands of modern high-end applications running on existing as well as emerging computing platforms. My current research focuses on: (1) improving serverless computing using a full-stack approach spanning application frameworks, platforms, and operating systems; (2) building scalable and efficient data-intensive computing systems (e.g., ML systems) and (3) utilizing ML approaches to improve the computing and storage systems.
